

# Questions posed by some re Covid19

- Is CV19 a real disease?
- Is the data for cases and deaths reliable?
- Has the reaction been managed by people with vested interests?
- Do masks work?
- Are lockdowns necessary?
- Is it all a big conspiracy?

# HAP Corona Virus “The Way-Out” Statement

FACTS - <https://www.healthaustraliaparty.com.au/news-articles-resources/official-statements/>

1. COVID19 is a real virus and it is contagious. It can be fatal in people with weakened immune systems (most often elderly, but can be of any age), and is usually mild in healthy people. Many infections are asymptomatic.
2. There is cause for concern in Australia because of our high national rate of chronic disease, making our general population more vulnerable than it otherwise would be.
3. There has been insufficient clarity in reporting. Cases have been redefined to include asymptomatic infections when usually cases are recorded only when a person presents with the illness. Figures for deaths have been overstated (the Vic. CHO 19/8/20).
4. The Australian responses have been directed by politicians with little knowledge of health issues who have therefore turned over decision making to CHOs who have been trained in, and are experts in pharmaceutical medicine, and whose responses therefore have been based around drugs, potential vaccines, masks and lockdowns. This has meant that **Australia has missed the opportunity to utilise many proven, evidence-based, nonpharmaceutical options to both treat and prevent the disease**

## The Key Point

This has meant that **Australia has missed the opportunity to utilise many proven, evidence-based, nonpharmaceutical options to both treat and prevent the disease**

# A Five Step Roadmap to Deal with COVID19

**STEP 1:** Open up the Australian healthcare system to all evidence-based treatment and prevention options, and replace health officials who prevent citizens and politicians from being fully informed about options.

**STEP 2:** Promote the availability of options to the public, and to doctors in both private practice and hospitals. Utilise Institutions such as NIIM and ACNEM to provide rapid training in COVID19 options to GPs and nurses.

**STEP 3:** Offer all citizens the option to be naturally immunised (not vaccinated) against COVID19 now, and complete that program before Christmas 2020.

**STEP 4:** Ensure that every State has best-practice contact-tracing available, has best-practice quarantine facilities for returning citizens and visitors, and best-practice treatment facilities for COVID19 cases needing hospitalisation.

**STEP 5:** Reopen State borders, remove lockdowns and use only locally if needed to contain clusters, make mask wearing optional except in very high-risk environments such as hospital wards, and provide open and complete information regularly to all citizens.

**STEP 1:** Open up the Australian healthcare system to all evidence-based treatment and prevention options, and replace health officials who prevent citizens and politicians from being fully informed about options.

**STEP 2:** Promote the availability of options to the public, and to doctors in both private practice and hospitals. Utilise Institutions such as NIIM and ACNEM to provide rapid training in COVID19 options to GPs and nurses.

- Zinc: Zinc ionophores (Quercetin. Note: hydroxychloroquine and chloroquine along with ivermectin are pharmaceutical zinc ionophores, but are not without some risks).
- Vitamin C: Vitamin D3: Vitamin A: Magnesium: Nascent Iodine: Melatonin:
- Glutathione (along with N-acetyl-cysteine and alpha-lipoic acid can address the cytokine storm):
- Selenium: Proteolytic Enzymes (Bromelain; Lumbrokinase; Nattokinase; Serrapeptase)
- Nebulized hydrogen peroxide and nebulized iodine, and Intravenous/intramuscular injections of hydrogen peroxide, vitamin C, and ozone.
- Dietary improvements, air quality, water quality, electromagnetic fields, and adequate sleep.

**STEP 3:** Offer all citizens the option to be naturally immunised (not vaccinated) against COVID19 now, and complete that program before Christmas 2020.

The Cuban population is around 11,325,000. By 30/4/2020, HP remedies were given to around 5mill. people, meaning around 6.3 mill. were unprotected. There were 1,472 cases in the unprotected group and 65 cases in the protected group, meaning an effectiveness of 94.7%.

This early study is not definitive, but is entirely consistent with HP figures published in 2019 involving government-associated interventions in over 60 million people with over 250 million annualised doses which showed an average effectiveness of 86-90% in real-world HP interventions against serious infectious diseases. Homoeoprophylaxis is a proven, evidence-based option.

- Golden I. Large Homoeoprophylaxis Interventions by Government Institutions. *Similia*. 2019; 31(2):14-19.
- Golden I. Large Homoeoprophylaxis: Brief and Long-Term Interventions. *American Journal of Homeopathic Medicine*. Spring, 2019; 112(1): 31-36.

**STEP 4:** Ensure that every State has best-practice contact-tracing available, has best-practice quarantine facilities for returning citizens and visitors, and best-practice treatment facilities for COVID19 cases needing hospitalisation.

Avoid the errors made by the Victorian Andrews government:

1. Entry points from overseas where infected people arrive. FAILED
2. Quarantine areas housing potentially infected people. FAILED BADLY
3. Hospitals where infected people would be treated. FAILED  
(health workers have to buy their own effective PPE)
4. Residential communities for the aged (+ Fed. Gvt.). FAILED BADLY
5. Effective contact tracing. Refused help FAILED

**STEP 5:** Reopen State borders, remove lockdowns and use only locally if needed to contain clusters, make mask wearing optional except in very high-risk environments such as hospital wards, and provide open and complete information regularly to all citizens.
